Adobe Acrobat Reader Troubleshooting Guide

If you can read this page, your Acrobat Reader program is working correctly! But you may still have problems or specific issues, such as printing and saving your downloadable file.

My printer won't print the text correctly

Almost all printing problems are due to not enough free system resources memory. The files are very memory intensive because they include graphics, text, and photos. Close all other programs/applications and print directly out of the Acrobat Reader program, not your Web browser.

Patterns are not printing full-size

Make sure your printer is set to print at 100 percent, "print to fit" is not checked and "page scaling" is set to "none". These settings are selected in the printer setup or printer options.

I can't find my file now that it's downloaded

Rather than viewing the plan in your browser, you must save it to your hard drive. Download the file again, except this time try right-clicking on the red download button. A menu window will open. Select "Save target as" or "Save link as" to save the file to your hard drive. Once saved, you can open it up with Adobe Acrobat Reader.

For more details on using Adobe Acrobat Reader please visit our online help section at:

rolling workshop storage

"This unit was designed and built to bring order out of the chaos in my workshop," explained reader Bernard Monneau of Calgary, Alberta, in his letter to us. We liked his idea of mixing plastic tubs and shelves so much, we built one for the *WOOD*® magazine shop and invite you to construct one for your work area as well.

The design centers around plastic storage tubs of the type sold in home centers and large discount stores. Our unit houses Rubbermaid Roughneck Storage Tote 3-gallon/11.3-liter containers. Adjust the project dimensions accordingly if you use a different size tub.

The entire project, minus the optional shelves and cleats, is built out of two sheets of MDF ($\frac{3}{4}$ " birch plywood would also work well). See the Cutting Diagram for optimal sheet-goods usage.

To build the project, cut the parts to the sizes noted on the drawing *below*. Rout a $\frac{1}{8}$ " round-over along the one exposed edge of each $1\frac{1}{2}\times 1\frac{1}{2}$ " cleat and along the top edge of each $\frac{3}{4}\times\frac{3}{4}$ " cleat where shown. (The round-over on the interior cleats allows the tubs to slide easier.) Then, drill the countersunk mounting holes through all parts where noted. Glue and screw the two dividers between the two sides. Next, attach the top, bottom, center partitions, and cleats. Mount the interior support cleats allowing just an inch or two of clearance, top to bottom, between containers. Attach the casters. 🌲
